

FULL STACK DEVELOPER

In Malden, design and create scalable enterprise grade software while managing an off-shore team of junior and mid-level developers.

Writing scalable, robust, testable, efficient, and easily maintainable code. Helping further refine and advance the skillset of development team. Translating software requirements into stable, working, high performance software for HVAC industry using knowledge and experience with the CoolCalc SaaS platform building PostgreSQL databases utilizing nested JSON.

Playing a key role in architectural and design decisions, building toward an efficient micro-services distributed architecture. Strong working knowledge of multiple back-end languages (PHP, Java, Go, C#).

Experience with Linux-based cloud computing systems. Working knowledge of JavaScript frameworks (Angular, React, Node.js). Strong CSS3 capabilities. Strong knowledge of Go programming language, paradigms, constructs, and idioms.

Solid technical background, with extensive first-hand knowledge of the HVAC industry and its various distribution channels. Ability to comprehend complex engineering principals such as thermodynamics, heat transfer and fluid dynamics. Experience developing REST Level 3 (HATEOS) distributed web applications.

Building and Installing Executables (Compiling Binary). Knowledge of common Goroutine and channel patterns. Familiarity with Go's templating language. Experience leveraging Go's standard routing functions. Ability to write clean and effective Godoc comments. Familiarity with code versioning tools.

Bachelor's degree in Computer Information Systems or related plus 3 years of experience in the job offered.
